Saddle Consultation by our Barefoot Team of Equine Physiotherapists

Before buying a Barefoot saddle, we recommend our **free online saddle consultation by the experienced Equine Physiotherapist Team.**

The Barefoot saddle should be adapted for your horse and then the saddle system can work optimally.

The flexible Barefoot saddle is suitable for every rideable horse. We would like to assist you in choosing the best saddle for your horse. Even with difficult horsebacks, we find a solution for you!

For a saddle consultation you only need to complete the consultation form. Access to our consultation form can be found directly on our homepage **www.barefoot-saddle.com**:

1 | Barefoot WELLington

Matching stirrups and stirrup leathers see page 50 and 51.

1 | Barefoot WELLington

Innovative dressage saddle from Barefoot developed in cooperation with dressage riders. The extra-narrow seat and special, flat saddle flaps allow excellent contact between the rider's leg and the horse. The detachable seat means the saddle is extremely flexible and adapts itself precisely to the horse's body shape.

The anatomically-contoured seat has a non-slip surface; the knee roll gently stabilizes the rider's leg in the correct dressage position.

Your horse's working muscles and movement of the back are transmitted unlike with any other

saddle of this type and therefore build the basis of more precise riding. At the same time the horse's back remains free of pressure. Demanding lessons, collections, transitions: Your horse can learn free of tension and build topline without any restriction by the saddle. There is no saddle pressure to stop your horse from moving freely.

The open stirrup attachment is fixed between the seat and the saddle's under construction and can easily be adjusted, giving the rider an exact fit. The Barefoot 3Layer VPS® System is the basis for the shape of the saddle and thus ensures the stability of the Wellington.

- flexible in all dimensions (X,Y,Z)
 - no pressure therefore no restriction to muscle build up
 - with 3Layer VPS® System
 - adjustable knee rolls
 - weight only approx. 6 kg
- WELL-01 Black**

1 | Barefoot Merlyn

Innovative dressage saddle in soft leather with extra short saddle flap for Cob horses or small riders.

Tip: the Merlyn saddle also fits bigger horses

Ultra-light saddle with our well-proven VPS system. The extra-narrow seat and special flat and short saddle flaps allow excellent contact between the rider's leg and the horse. The detachable seat means the saddle is extremely flexible and adapts itself precisely to the horse's body shape.

The anatomically-contoured seat has a non-slip surface; the soft knee roll gently stabilizes the rider's leg in the correct position.

Your horse's working muscles and movement of the back are transmitted unlike with any other saddle of this type and therefore build the basis of more precise riding. At the same time the horse's back remains free of pressure. Demanding lessons, collections, transitions: Your horse can learn free of tension and build topline without any restriction by the saddle. There is no saddle pressure to stop your horse from moving freely.

- flexible in all dimensions (X,Y,Z)
- no pressure and therefore no restriction of muscle development
- flexible V-girth
- VPS® System
- very soft knee rolls
- weight only 5kg (approx.)

NEW

1 | Barefoot Merlyn

2 | Barefoot Shape-It-Soft

During basic training and groundwork signals should reach the horse as precisely as possible? – especially on the horse's sensitive head. Most nosebands used for this training unfortunately slip back and forth on the nose/head and make precise 'on the spot' aids impossible. That is why we have been thinking and developed a nose piece which incorporates a sturdy, bendy wire: The noseband is shaped around this wire and can therefore be fitted to each individual horse's head. The nose piece stays in a better position and does not slip.

The Barefoot soft noseband is wide and comfortably padded. The Barefoot soft noseband is even suitable for bitless riding: The reins are buckled to the outer rings.

**STRETCH®
& BREATH®**

Products from the Barefoot range Stretch&Breath® are particularly comfortable for the horse:

The highly elasticated material used allows the horse to breathe, the rib cage can expand whilst the saddle sits perfectly.

Girths are tear-resistant and will not loose shape.

2 | Girth Stretch & Breath®

1 | Barefoot Barrydale

Dressage saddle for classical riders.

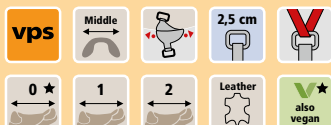

The anatomically shaped, duo coloured, soft Nubuck leather knee rolls, incorporated in the detachable seat of this Barefoot Saddle, frame the rider to allow for a deep and very secure seat whether out hacking or in the arena.

The Barefoot Barrydale is particularly popular with Endurance Riders. Your legs are precisely positioned, the saddle stays secure, the horse's back pressure free - a must especially on long distance rides.

With this saddle you will feel your horse's muscles work and the movement of its back, the basic requirements for more advanced riding.

- flexible in all dimensions (X,Y,Z)
- no pressure therefore no restriction to muscle build up
- large, anatomically shaped knee rolls
- weight only approx. 6 kg

BD-01/GY	Black/Grey	Nubuck Leather
BD-02/NB	Brown/Hazelnut	Nubuck Leather
BD-01	Black	Soft Leather

2 | Girth Stretch&Breath®

The material for the Stretch&Breath® girth is specially made for us. This gives us a material which is tear-resistant but also totally stretchy.

The Stretch&Breath® material is then wrapped with a soft, adjustable case that protects the horse's sensitive girth area.

Advantages of the Stretch&Breath® girth at a glance:

- completely elastic: the horse's breathing chest movement is not restricted
- Soft coated with neoprene
- backed roller buckles at both ends
- The entire girth is machine washable

Length: 35, 45, 55, 65, 75, 85

1 | Barefoot London

Dressage cut saddle made of soft cow hide designed with your horse's comfort in mind. The long saddle flap positions the rider's leg in an open dressage seat which will not lock the rider into a fixed position. The saddle provides the deep seat and close contact feel typical for Barefoot. The London will enable you to feel your horse's muscles and movements which provides the foundation for very refined riding. Padded knee flap. Comes with 2 pairs of knee rolls (different sizes) and can be velcroed to the saddle according to your individual needs. This saddle is also very suitable as a trail saddle and comes with 6 D-rings to attach all your travel/riding needs.

- flexible in all dimensions (X,Y,Z)
- promotes the development of a good topline
- close contact feel for refined riding
- weight only approx. 5 kg

London

3 | Devon Bridle, english style

1 | Barefoot London

Matching stirrups and stirrup leathers see page 50 and 51.

3 | Devon Bridle, english style

This English bridle is designed according to the Barefoot's philosophy 'for riders who care'.

Browband, crown piece and noseband are all softly padded also including the areas behind the buckles. The padding is made of calfskin leather with neoprene fill which will avoid that too much pressure is put on to the poll and nasal bone of the horse. The padding is wider than the narrow and flat leather top which makes this bridle very flexible and avoids skin irritations and friction to the sensitive areas on the horse's head. The crown piece is embedded in a wide and soft padding to protect the sensitive area behind the ears and to take the pressure off the first cervical vertebrae.

5 | Browband Set 2-in-1 with Fly Protection

Innovation from Barefoot – Exchangeable browband with fly protection. The softly padded, leather covered underside has a velcro fastening upper to which you then have the choice to either attach a: 1. upper part made of leather. 2. upper part (Leather) with incorporated fly fringes (nylon). Both are included in the set so the browband can easily be changed in seconds.

- quick function change
 - a. fly fringe
 - b. fly protection or regular browband
- suitable for use with most bridles
- soft padding made of soft leather
- fly fringes stay where they should

No annoying slipping as with conventional fly-fringes, the fringes stay where they should!

2 | Barefoot Lexington

4 | Barefoot Lexington

Exclusive and innovative saddle in the classical dressage design manufactured with soft Nubuck, wedge-shaped bolster underneath the seat and kneerolls which can be adjusted via Velcro.

This saddle lets the rider feel every movement of the horse's back and his muscles – thus creating a sound foundation for subtle riding.

The Lexington is equipped with a wedge-shaped VPS® padding, raising the seat in the rear and thus enabling a straight position for the rider, which is even further supported by the distinct knee-roll.

This saddle is suitable for horses with more withers and rather sloping back line. For wide horses with flat withers is this saddle model not suitable.

- flexible in all 3 dimensions (X,Y,Z)
- no peak pressure thus no reduction of back muscles
- **wedge-shaped VPS®** „vertebrae protecting system“ underneath seat
- adjustable knee-rolls with AirPumpSystem
- weight just about 6 kg

LEX-01 Black

2 | **Sevilla Vaquero Bridle**
Chocolate

2 | Sevilla Vaquero Bridle

Comfortable and authentic Vaquero bridle made of durable, vegetable tanned, brazilian leather of best quality. Crown piece, noseband and browbands are lightly padded. This will make the bridle comfortable for your horse while providing the authentic Spanish look.

The browband with its Frontaleras (soft leather bands) offers protection from flies. The integrated Pinas are made of raw hide. If you don't like the moving Frontaleras for every day riding you can exchange it for a padded browband without Frontaleras (included with this bridle). It has embroidered leather Pinas.

- adjustable on both sides
- 2 softly padded browbands
- spanish hardware and decoration
- reins included

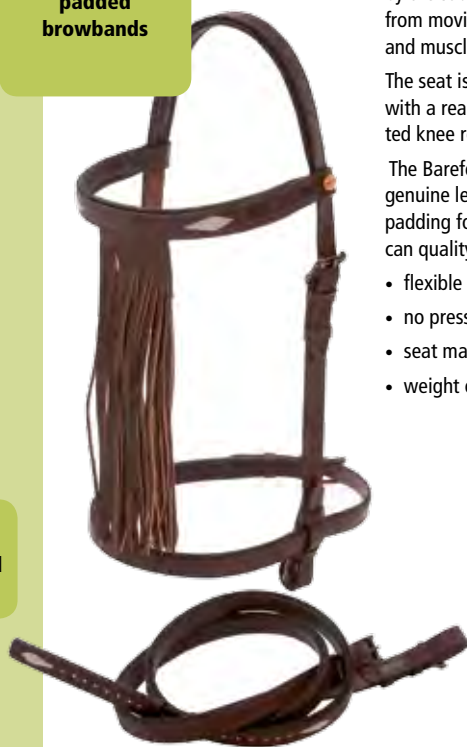

Rein length - measured one sided:
approx. 170 cm.

1 | **Barefoot Madrid**

V-Girthing

The special girth system gives saddle additional stability on horse's back

1 | Barefoot Madrid

Our Barefoot model Madrid is optically made for classical riding, but not only does it look right also allows a deep, secure seat. Closeness to the horse is noticeable: Your horse's working muscles and movement of the back are transmitted unlike with any other saddle of this type and therefore build the basis of more precise riding.

At the same time the horse's back remains free of pressure. Demanding lessons, collections, transitions: Your horse can learn free of tension and build topline without any restriction by the saddle. There is no saddle pressure to stop your horse from moving freely. Blood supply to muscles remains intact and muscles can therefore build up.

The seat is removable through velcro and can be exchanged with a real sheep wool seat. The sheep wool seat has integrated knee rolls and can be purchased separately.

The Barefoot Madrid is made from two different types of genuine leather: Soft, supple, non-slip suede with integrated padding for the seat and sturdy, smooth leather (South American quality) for the rest of the saddle.

- flexible in all 3 dimensions (X,Y,Z)
- no pressure and therefore no restriction in muscle build up
- seat made of sheepskin with kneerolls additionally possible
- weight only approx. 6 kg

Barefoot
riders who care

Mindset

The Barefoot saddle system allows muscle build up as it adapts to the anatomy, movement and changes of the horse's back and it also absorbs pressure.

Back muscles will build up and the horse can use this new strength to carry a rider. It allows the horse to loosen up and achieve better results in sport and leisure.

Innovation: Size adjustable saddle

Support giving thigh blocks freely adjustable

1 | Barefoot JustAdjust

1 | Barefoot JustAdjust

Innovation: JustAdjust from Barefoot – a saddle adjustable in size!

The cantle is removable and can be freely positioned via a velcro system. You can therefore adjust the seat size of the saddle to suit each individual rider.

The back cantle of the saddle is removable and can be freely positioned via a velcro system.

You can therefore adjust the seat size of the saddle to suit each individual rider.

Perfect for different riders.

The Barefoot JustAdjust provides movable thigh blocks for a secure seat and movable stirrup bars which can both be positioned depending on rider's size and preference.

The Barefoot JustAdjust is ideal for riding schools, RDA Centers or private yards where riders are sharing a saddle. Also perfect for riders who are changing shape: i.e during pregnancy or diets. The saddle offers sufficient support and security even for insecure riders. The closeness of saddle/ rider to the horse makes following the horse's movement much easier and ensures faster, more enjoyable learning.

The saddle is made from easy-care Drytex™ and comes with a non-slip suede seat. Black fleece underside.

- flexible in all 3 dimensions (X,Y,Z)
- no pressure so therefore no restriction to muscle build up
- adjustable seat size
- weight just only about 4 kg

6 | Barefoot Arizona Nut and Arizona Rose

Horsefriendly westernsaddle made from Brazilian calf leather, crafted and tooled by hand in small basket design. Very deep seat - near to horseback! This saddle has an suede leather seat. The saddle comes including matching fenders and with leather covered and tooled stirrups.

Adjustable and flexible on the horse, comfortable for the rider. Short round skirts to accommodate short backs, also for use on horses with slightly higher withers. This model is made from more sturdy leather as we need harder material as base for the toolings. Therefore the Arizona Nut takes longer to mould to your horse's back.

- flexible in all 3 dimensions (X,Y,Z)
- no peak pressure and no limits to movements and buildup of muscles
- weight just 7 kg

AR-NUT-02 Chocolate oiled
AR-ROSE-00 Light oiled

Including fenders and leather covered and tooled stirrups.

Wide Fenders,
Brown

2 | Barefoot Nevada

Horse friendly western saddle made of robust, open pore cow hide, especially pliable to mould around your horse's back and very comfortable for the rider.

Very deep seat. Light colored, thick fleece underside, 6 D-rings, conchas and leather strings to attach your travel/riding needs. Square skirts will provide more stability on big framed, wide and round horses with flat withers. The English billet system provides improved lateral stability for thick bellied horses with a forward girthgroove.

- flexible in all 3 dimensions (X,Y,Z)
- no pressure points and therefore no restriction to muscle buildup
- weight only approx. 7 kg

NE-01 Black
NE-02 Brown

3 | Fender

Made of smooth durable leather. Inclusive hobble straps. Buckles on the bottom to avoid bulk under the inner thighs. Well suited if you want to ride without chaps or boots: there's no pinching into your lower leg. All our western stirrups will fit these fenders. See page 51.

3 | Support Fender with knee roll

3 | Support Fender with knee roll

Our Support-Fender with integrated knee rolls not only offer more security - hacking out or during schooling; but the rider also sits more comfortably. The knee area is raised through soft rolls and support the rider's knee contact.

Leathers can be pulled through a hollow space within the fenders. Leathers are not included.

Innovative feature: You can use standard width or wide leathers (max 5cm) with fenders allowing you the choice of your preferred stirrups.

- rider's leg lies quieter against the saddle
 - can also be used with English stirrups
 - knee rolls support the seat and give security
 - no direct contact of clothing with horse
 - you can ride without boots or chaps
 - suitable for all saddles without knee rolls
- Ideal for Barefoot Cheyenne or Barefoot Atlanta and Arizona. Material: Real Leather

1 | Barefoot Soft Walk

NEW - Fursaddle Soft Walk with DryTex Fundament

The structure of the Soft Walk corresponds to our proven Barefoot saddles: The saddle offers the same protection for the horse and the same flexibility. The integrated VPS® System protects the horse's back from pressure points and the saddle adapts to the horse's movement to allow muscle development instead of bruising of the muscles.

It is therefore possible to use this saddle just as normal with stirrups without any restrictions.

For all riders who want to feel safe in the saddle without feeling restricted! The Soft Walk offers even more comfort for the rider: The seat is super soft with the large incorporated foam padding ensuring such a secure, embedded seat for the rider that he will not want to get off. A soft, anatomically shaped cushion is secured (velcro) under the genuine sheepskin seat. This makes the seat even more comfortable and easier on the hips as it gives the saddle more of a twist ensuring the rider does not sit too wide.

SADDLES FURSADDLE

1 | Barefoot Happy Valley and
2 | Barefoot Lazy Mountain

NEW – Fursaddle Lazy Mountain and Happy Valley with leather fundament

The saddle models Lazy Mountain and Happy Valley were developed after listening to rider's feedback, who wanted a sheepskin saddle that would not cause problems for the horse's back but one that also offered the comfort of a genuine sheepskin saddle.

The structures of this Fursaddle correspond to our proven Barefoot saddles: The saddle offers the same protection for the horse

and the same flexibility. The integrated VPS® System protects the horse's back from pressure points and the saddle adapts to the horse's movement to allow muscle development instead of bruising of the muscles. It is therefore possible to use this saddle just as normal with stirrups or fender without any restrictions.

For all riders who want to feel safe in the saddle without feeling restricted! The Barefoot Fursaddle offers even more comfort for the rider: The seat is super soft with the large incorporated foam padding ensuring such a secure, embedded seat for the rider that he will not want to get off. A soft, anatomically shaped cushion is secured (velcro) under the genuine

sheepskin seat. This makes the seat even more comfortable and easier on the hips as it gives the saddle more of a twist ensuring the rider does not sit too wide.

We have a specially devised rigging system on this saddle: Two girth straps run through and over padding made of soft leather to avoid coat irritation or even worse pressure points on the sensitive belly. Dressage girth is required.

Strong riders – strong horses

Our special saddle series „Strong riders - strong horses“

offers the Barefoot saddle models Nottingham, Happy Valley, Lazy Mountain and Arizona in the seat size 3 for riders with clothing size 46-48 / 50 (women) and 54-56 / 58 (men).

Because of the proven Barefoot VPS® System (= vertebrae protecting system) has our saddle no weight limit.

Important:

The rider should always fit into the barefoot saddle. This has the following reason: The rider sits between two molded cushions. The front part (pommel) should be able to move on the horse shoulder so as not to disturb the freedom of movement of the horse shoulder. If the rider does not fit the saddle, he will sit on the pommel insert and thus block into this movement.

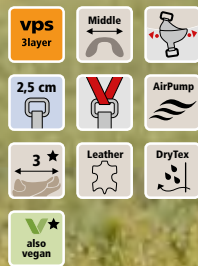

In the back area the Barefoot makes no pressure by the rider weight, that means that, although "there is the saddle", this area remains nearly free from pressure/from the rider's weight. Therefore the Barefoot may be longer than a conventional saddle.

The Barefoot in seat size 3 are especially suitable for horses with large frames.

The saddle in size 3 is especially made for you; a return/exchange is therefore not possible. Please be aware that we need 12-14 weeks for delivery.

1 | Barefoot Arizona

Saddle made of robust, open pore cow hide, very pliable and moulds to the horse's back, very deep seat, near to horseback and short round skirts. Very good saddle positioning for short horses.

More information see page 24.

- AR-01 Black
- AR-02 Brown

2 | Barefoot Lazy Mountain and

3 | Barefoot Happy Valley

The structure of this Fursaddle corresponds to our proven Barefoot saddles: The saddle offers the same protection for the horse and the same flexibility. The integrated VPS system protects the horse's back from pressure points and the saddle adapts to the horse's movement to allow muscle development instead of bruising of the muscles. It is therefore possible to use this saddle just as normal with stirrups or fender without any restrictions.

The seat is super soft with the large incorporated foam padding ensuring such a secure, embedded seat for the rider that he will not want to get off. A soft, anatomically shaped cushion is secured (velcro) under the genuine sheepskin seat.

More information see page 36 and 37.

4 | Barefoot Nottingham

The saddle is also equipped with a 3layer VPS® System, this ensures even more protection from pressure under the stirrup attachment. Therefore this saddle is not only suitable for heavier riders but also for long treks and other strains. Nevertheless, the saddle will still be flexible ensuring the horse's comfort and not restricting his movements.

More information see page 22.

1 | Barefoot
Special Saddle Pads

Specially designed for our Barefoot Saddles, in different shapes and colors for all saddle models.

The Special saddle Pads are cut to the shape of our saddles. They are contoured to accommodate the horse's withers and have a split over the wither area to avoid rubbing and compression. Anatomically formed, removable inserts generate good spinal clearance and guarantee ideal pressure absorption and distribution.

Even more comfort and cushioning is achieved by the pure wool underside which provides temperature regulation and moisture absorption. There is no fleece lining right over the spine to provide additional clearance for the spine and spinous processes. All saddle pads have Poly cotton padding inside and the top layer is made of tough and durable quilted cotton. All pads come with velcro straps to attach to the saddles' D-rings.

- anatomically shaped pad
- fleece underside with wither and spine relief
- spinal clearance
- improves the weight distribution
- ideal shock absorption
- moisture absorbing

Pads can be machine washed at 30 degrees (delicate cycle) with wool detergent.

Quilted cotton with felt underside + Sympanova

Lower part:

2/3 gripping sympanova
1/3 balancing sheepskin

3 | Inlay Heavy Duty for Saddle Pads

- developed for the extreme
- for heavy riders, trail, endurance or others

They are not only shock absorbent but also distribute weight evenly through a polyurethane plate inserted into the cellular rubber. The edges of the inserts are softly rounded and tapered to ensure no developing pressure ridges even on long rides.

These inserts are recommended for long distance riders and also for pressure sensitive horses who have previously suffered from saddle pressure sores.

Please contact us if you need help.

Thickness: 20 mm

INLAY-PAD-HEAVY

cannot be trimmed

1 | Barefoot Physio Saddle Pad System

Available in different shapes and colors for all our Barefoot saddle models. Developed for the demands during long rides, for heavier riders, round horses on which every saddle tends to slip or horses with protruding spinous processes.

All physio pads are shaped to accommodate the horse's spine and offer ideal pressure absorption and distribution.

This system offers additional clearance and lift over the spinous processes of the thoracic vertebrae and consists of 2 components which are pressure absorbing and are connected securely with velcro.

a. Lower part:

Anatomically cut made of quilted cotton, thinned under the upper thigh for a close leg contact, pressure absorbing foam inserts can be removed through an easy velcro opening.

2/3 gripping sympanova underside will stabilize the saddle even on very round horses – the rear 1/3 is made out of real sheepskin to protect this sensitive area. The sheepskin glides over the horses coat and therefore eliminates potential rubbing under the cantle.

b. Top layer:

Quilted cotton upper fabric with felt underside, poly fleece inside and foam layer on top (will keep the saddle in place and supplies additional pressure absorption).

Velcro straps attach to the saddles D-rings. Machine washable at 30 degrees.

1 pair of 15 mm foam inserts are included with this saddle pad.

- anatomically cut
- supplies spinal clearance even for horses with atrophied spines
- well cushioned, suitable also for heavier riders
- non-slip

4 | Barefoot Physio Cushion

The Physio Cushion with optional extra padding can either be placed under a normal saddle pad or used in place of the under layer of the Physio saddle pad system (for example when one single saddle is used on several horses of different stature).

It is anatomically tailored from high-quality microfibre with less material around the leg area, allowing closer contact with the horse. The front and rear pockets have Velcro fastenings to allow easy removal or replacing with additional padding. This variable padding system means the saddle can be adapted exactly to the horse's body shape.

The non-slip Sympanova underside holds the saddle firmly in place, even on sturdy horses.

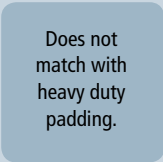

- for saddle adaption
- could be padded
- with velcro
- Slip-proof underside
- with real sheep-wool

Size M: Fits our saddle models Cheyenne, Cherokee, Merlyn, London, Lexington, Barrydale, Nottingham, JustAdjust, Soft Walk and WELLington.

Size L: Fits our saddle models Arizona, Atlanta, Nevada, Madrid, Missoula Nut, Virginia Rose, Lazy Mountain, Happy Valley.

Padding not included.

PH-CUSHION Black

Balancing Barefoot Saddles through the saddle pad

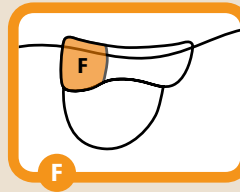

A saddle should always sit level on the horse's back.

The Barefoot Saddle System can easily be balanced – should your horse's conformation make this necessary – by adding padding to certain areas of saddle pad.

To shim the saddle pad is very straight forward (see photos).

Best material to use are shims made of cellular rubber foam which are cut accordingly.

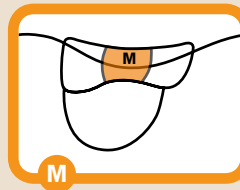

3 Examples of balancing padding

Shimming the front:

Recommended in the following situations:

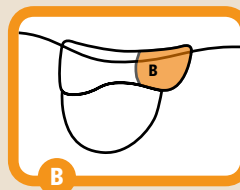

- The saddle is dipping forward
- The saddle rides up the neck
- The rider feels he is being tipped forward
- Horse is croup high
- Pommel insert too wide

Shimming the middle:

Recommended in the following situation:

- The horse has a pronounced sway back

Shimming the back:

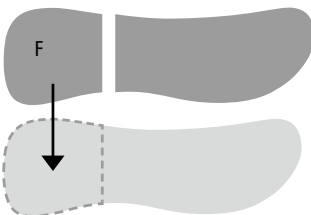

Recommended in the following situations:

- The saddle slips back
- The rider feels he is being tipped backwards
- The horse has loaded shoulders
- The horse has a very long back

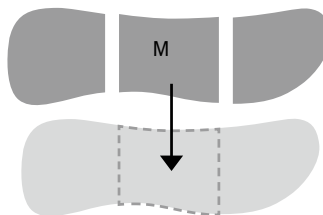

The edges are cut at an angle to prevent the formation of a step.

F Cut cellular rubber shim in 1/3 and 2/3 pieces

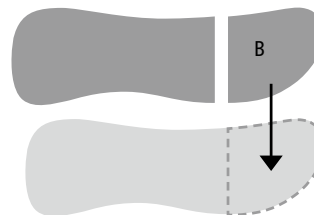

Insert front piece on top of PU-foam shim

M Cut cellular rubber shim in three 1/3 pieces

Insert middle piece on top of PU-foam shim

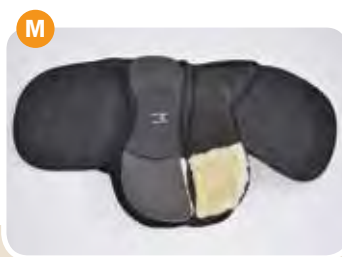

B Cut cellular rubber shim in 2/3 and 1/3 pieces

Insert rear piece on top of Pu-foam shim

cellular rubber shim

PU-foam shim

The inlay is easy to insert.

Cut shims are always placed towards the rider.

Ideally an additional full length soft, Pu-foam shim is placed towards the horse.

1 | Barefoot Physio Trailpad

2-in-1 Pad – for daily usage and for attachment under luggage.

Delivery including 2 different pairs of inserts!

Developed for the demands during long rides, with detachable attachment to protect when using saddle bags. The attachment is lined with real sheep fur, which protects the horse and diverts rubbing. Thanks to Velcro fasteners it can easily and quickly be detached so the pad can also be used without it for every day use. This saves you from obtaining two different saddle pads.

The Barefoot Physio Trailpad can be used with all Barefoot Saddles, but it is also smart to be used under conventional saddles because of its functions:

All Physio Trailpads are shaped to accommodate the horse's spine and offer ideal pressure absorption and distribution.

This system offers additional clearance over the spinous processes of the thoracic vertebrae and consists of 2 components which are pressure absorbing and are connected securely with Velcro.

a. Lower part:

Anatomically cut made of quilted cotton, thinned under the upper thigh for a close leg contact, pressure absorbing foam inserts can be removed through an easy Velcro opening.

2/3 gripping sympanova underside will stabilize the saddle even on very round horses – the rear 1/3 is lined with sheep fur to protect this sensitive area. The fur glides over the horses coat and therefore eliminates potential rubbing under the cantle. Additional sheep fur in the front to cushion the movement of the shoulder.

b. Upper layer:

Quilted cotton or microfiber fabric with felt underside, poly fleece inside and sympanova layer on top (will keep the saddle in place, supplies additional pressure absorption and offers some air circulation). Velcro straps to attach pad to the saddle.

1 | Barefoot Physio Trailpad
Size A

Barefoot Physio Trailpad underside

2 pairs of 15 mm anatomically trimmed foam inserts are included with this saddle pad: Soft (PU-Foam) - adapts well; dense (rubberfoam): for heavy riders see page 44.

Size A Topside: black cotton material for all saddles with longer saddle flaps, such as Barefoot Modell Barrydale, London, Cheyenne, Cherokee, Madrid, Nevada, JustAdjust, Nottingham, Soft Walk

TRAIL-PAD-A Black ●

Size B Topside: brown microfiber material for all saddles with short side jockeys, such as Barefoot saddle Model Atlanta, Arizona, Missoula Nut, Virginia Rose, Lazy Mountain, Happy Valley.

TRAIL-PAD-B Brown ●

- with detachable attachment
- anatomically shaped
- supplies spinal clearance even for sensitive horses with visible spinous processes
- well cushioned, suitable also for heavier riders
- non-slip
- including two different pairs of inserts
- washable at 30 degrees

1 | Barefoot Physio Trailpad
Size B

All Barefoot Saddles can be adjusted to suit horses with different shoulder conformations.

Easy fitting: open front zipper, exchange pommel inserts, close zipper – finished!

How to correctly change the front pommel: Find detailed instructions here: www.barefoot-saddle.com

Easy to adjust on your horse's shoulder

1 | Exchange Pommels

- change without trouble
- adjust to your horse's shoulder yourself
- easy saddle fit to different horses and training steps

FG-XXL
Size XXL
FG-WI
Size Wide
FG-MI
Size Middle
FG-NA
Size Narrow

2 | Exchange Fork

Exchangeable fork for all Barefoot Saddles with horn.

Size Middle, Wide or XXL::

- FO-01** Black
- FO-02** Brown
- FO-MISU** Chocolate oiled
- FO-VIRG** Light oiled

3 | Exchange pommel with handles

We recommend the HDR-Handles for rider training, therapy, spooky horses, insecure riders...

The HDR-handles are anatomically shaped giving a safe hold in large and small hands. It can be used in any Barefoot saddle with fork (pommel with horn).

Shoulder width/Size: Middle, Wide or XXL

HDR Handle Black

4 | Barefoot Soft Inlay, cotton

The fiberglass pommel insert can be exchanged with this soft insert. Made of a cotton sleeve filled with cotton wool. This insert is as soft as a stuffed toy and is flexible in all directions. We recommend this product for all horses with a sensitive shoulder/wither area, see page 46.

Normal size: for saddles 0, 1, 2

Size XO: only pony saddle

SOFT-EIN

Recommended sizes for your horse's shoulder

- XXL:** for horses with extremely wide shoulders (draft horses)
- Wide:** for horses with wide shoulders and no significant withers
- Middle:** for narrow horses
- Narrow:** for very narrow horses

Determine the correct size with our Shoulder Measurement Templates

6 | Barefoot Shoulder Measurement Templates

Fit your Barefoot Saddle securely and easily to your horse's shoulders!

With the help of the shoulder measurement templates you can easily determine whether the pommel insert

placed inside the saddle fits your horse. We provide a set of 4 different templates (4 sizes).

To avoid any confusion, the templates are coloured to match the exchange pommel inserts.

Recommendation: Please select the wider size should your horse fall in between two sizes to allow room for muscle build up.

Please note: The Barefoot Exchange Pommels are in itself elastic. The material therefore intentionally

5 | Saddle Horn, Velcro

Saddle horn for decoration. Best in combination with Barefoot Soft-Inlay. Attachable by Velcro.

- HORN-01** Black
- HORN-01** Brown

adjusts to movement. Small deviations between template and shoulder width are therefore easily offset.

Material: firm cardboard, laquered

TEMPLATE-SET

Set (4 Sizes)

Alternatively you can still use our DIY downloadable templates for free: www.barefoot-saddle.com/de/en/measuring-template

1 | Barefoot Saddle Seat, 100 % sheepskin

Seat replacements made of real, soft and cosy sheepskin especially manufactured for our Barefoot Saddle models.

These seat replacements do not slip as they are attached via Velcro to the saddle. The entire leather seat is replaced for the sheepskin one.

Ideal for riders which are sensitive and others who just want to be extra comfortable in the saddle.

- ideal pressure absorption
- warm in winter, cool in summer
- temperature regulating
- moisture absorbing

All seats in sizes 1 and 2.

SHEEP

Especially made for the different Barefoot saddle models

2 | Seat Cushion – Hip Saver

The comfortably-padded Hip Saver was developed to give you a narrower sitting position and fits all our Barefoot saddles.

The Hip Saver is designed to give smaller, slender riders a narrower, more comfortable position in the saddle.

The Hip Saver can be fixed using Velcro fasteners between the seat and the stirrup attachment to give you a narrower sitting position.

It fits all our Barefoot saddle models and is available in 2 sizes; both sizes have a black DryTex™ surface.

HIP-SAVER-01 Black

Hip Saver fixed using Velcro fasteners at stirrup attachment

give you a narrower sitting position

2 | Seat Cushion – Hip Saver

3 | Saver from Sheepwool

Can be used as a nose, neck, jaw or chin guard and is simply velcroed on the relevant part of the bridle. Annoying disassembly of the entire bridle is unnecessary.

Of course, you can use the saver for your stable or pasture halter, too. Soft and anti-bacterial sheepwool base, soft cushioned and a quilted top. No „bulky“ look.

Width: 6 cm, Length: 28 cm

Black, Wool Natural

SW-BRID/HALT-COVER

Model Cheyenne

Model Arizona

Colours: Black for saddles London and Cherokee. Natural for all other saddle.

Please order seat model London for Cherokee Classic and Nottingham model!

4 | SheepWool Seat Cover

5 | Covers made of SheepWool

4 | SheepWool Seat Cover

The Barefoot seat cover can be used with all Barefoot saddles. The saddles are even more comfortable and really cozy. This cover will also fit many traditional western saddles - just order a size 2!

The seat cover is easily attached by two Velcro strips on the left and right sides of the saddle seat. There is a bulge on the back of the cover that is stretched over the seat back. After a short ride the seat cover molds to the saddle. The Sympanova on the underside of the seat pad prevents it slipping, so the rider feels safer with a softer seat at the same time.

- soft seat
- pressure absorbing
- easy attachment

Sizes 1 and 2.

SW-SEAT-COVER Natural

5 | Covers made of SheepWool

Our sheep wool covers wrap stirrup leathers or breastplates and are so soft and protective. They are secured with Velcro for quick and easy placement and removal.

- for stirrup leathers or breastplates
- dont pinch the riders leg
- no rubbing of the leathers to the saddle

SW-SL-COVER Natural

1 | Safety Stirrup with Hinges

1 | Safety Stirrup with Hinges

This safety stirrup has hinges which will move forwards and backwards. The stirrup will release the foot during a fall and will offer the rider comfort and flexibility during riding. Made of stainless steel, with changeable rubber inserts. Delivered in bag for easy storage.

- safety for the rider
- flexible

Width of tread: 12.5 cm
SAFEST-HINGE

6 | Western Stirrups Economy

Functional, leather covered stirrups, very durable. Deep surface area for the ball of your foot.

Width of tread: 12.5 cm
STIR-WEST-ECO-01 Black
STIR-WEST-ECO-02 Brown

2 | Safety Stirrups, stainless steel

Made of high quality stainless steel with leather flap and elastic band on the other side. Will save you from getting your foot trapped in the stirrup during a fall, as the elastic band will open and release the foot.

Width of tread: 12.5 cm
SAFEST

7 | Western Stirrups Visalia

Exclusive stirrup in bell bottom shape. Made of fiberglass and covered with high quality leather. Braided on the sides. Medium weight.

Width of tread: 13 cm
STIR-WEST-LED-01 Black
STIR-WEST-LED-02 Chocolate
STIR-WEST-LED-00 Light oiled

8 | Sevilla Stirrup

Sevilla Stirrups are made of high quality stainless steel in the typical baroque style. Anti-Slip tread, medium heavy and chrome (shiny) covered.

Width of tread: 12 cm
STIR-SEV

NEW

New: 90° angled eye automatically hangs at the correct angle for your foot.

10 | Mono Dressage Stirrup Leathers

Dressage stirrup leathers made from soft, sturdy leather. Leathers are of single thickness – therefore less bulky, lighter and do not pinch.

Stirrup leathers fasten at top and bottom, with neat T-Buckles. Top buckle to fasten to the bars of the saddle; bottom buckle to adjust the length of leathers. Adjustment made from saddle is, therefore, easier and safer as rider's leg stays in contact with the skirt of the saddle.

- small buckle near the horse's back – no pressure
- no pinching of the rider's leg
- easy adjustment
- practical, save adjustment from the saddle

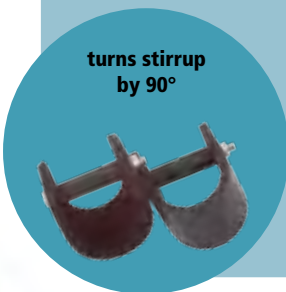

Length: S = 49-63 cm
SL-T-MONO-S-01 Black
SL-T-MONO-S-02 Brown
Length: L = 57-72 cm

NEW

New: 90° angled eye automatically hangs at the correct angle for your foot.

4 | Soft-Step Stirrup

Lightweight Aluminium, with springy soft-step, suitable for wide leathers and fenders.

Width of tread: 11.5 cm
STIR-WEST-ALU-01 Black
STIR-WEST-ALU-02 Brown

5 | Safety Stirrups with Cage

Lightweight aluminium stirrup with safety cage made of rubber, which prevents the foot from slipping through and rider being dragged in case of a fall.

Width of tread: 11.5 x 9 cm
SAFEST-CAGE-ALU
Width of tread: 10.5 x 8 cm
SAFEST-CAGE-SMALL

Also as kids size.

9 | Tapaderos

These are safety stirrups for all western riders. Will prevent your foot from slipping through the stirrup. Matching to all Barefoot fenders and all others.

Width of tread: 12,5 cm
TA-01 Black
TA-02 Brown

12 | Fenders

Made of smooth durable leather. Inclusive hobble straps. Buckles on the bottom to avoid bulk under the inner thighs. Well suited if you want to ride without chaps or boots: there's no pinching into your lower leg. All our western stirrups will fit these fenders.

Width: 5 cm fits all saddles with this sign

Width: 2.5 cm fits all saddles with this sign

13 | Hobble Straps for Fenders

Replacement hobble straps for all Barefoot fenders and other fender brands.

Narrow Fenders:

FE-NA-1/2-01 Black
FE-NA-1/2-02 Brown

14 | Wide Leathers, special style

These leathers are double the width of regular ones. The rider's leg is more stable. We recommend these leathers for our models Cherokee (except Cherokee Classic) and Atlanta. All our western stirrups will fit these wide leathers.

The buckles on these leathers are on the bottom to avoid bulk under the inner thighs. Easy adjustment from the saddle. Nylon lined to avoid stretching. These wide leathers are great to use without chaps or boots since they won't pinch your lower leg.

- No buckle pressure on the horse's back
- Easy adjustment from the saddle
- Nylon backing

Length: 140 cm

15 | Stirrup Leathers, special style
Version DryTex™

1 | Saddle Girth System

1 | Saddle Girth System

The Barefoot girth system has two components. The top side is elastic and equipped with 4 stainless steel roller buckles. The lower part consists of a thick and soft padding surrounded by leather. The padding is able to adapt and therefore nestles softly to the horse's belly without following the movement of the saddle and the elastic component. Any kind of skin irritation and bruising in the girth area are avoided.

This system combines greatest safety during girthing with the utmost comfort for the horse. The D-ring can be flapped down when not needed.

- elastic girth does not inhibit the horse's breathing
- anatomically cut for elbow clearance
- roller buckles

Length in cm (measured from buckle to buckle): 35, 45, 55, 65, 75, 85

G/ENG-01 Black
G/ENG-02 Brown

2 | Anatomical Western Saddle Girth

2 | Anatomical Western Saddle Girth

Made of high quality leather, anatomically shaped. Soft padding. Large, flat and durable buckles made of stainless steel.

Ideal for sensitive horses.

- anatomical cut for elbow clearance
- flat buckles
- soft padding

Length in cm (from buckle to buckle): 55, 65, 75, 85

G/WES-01 Black
G/WES-02 Brown

3 | Sheepskin Saddle Girth

Super soft for sensitive girth positions.

The Barefoot sheepskin girth is made out of two components. 1. genuine sheepskin 2. sturdy nylon girth. Velcro firmly secures the two parts but allows the sheepskin to easily be removed for washing.

Sheepskin acts as an anti-allergen and minimises fungal attacks. The nylon girth has elasticated, tearproof straps on one side to allow the horse to breathe easily.

- anti-allergen
- minimises fungal attacks
- elasticated and flexible
- easy-care due to removable sheepskin

Sheepskin is a natural product, small variances in colour and length of the fur is therefore normal. Please do not dry in direct sunshine and wash with special detergents. Lay flat after washing.

Length: 45, 55, 65, 75

G/ENG-SS Black, Fur Natural

4 | Holder for girths and stirrups, leather

4 | Holder for girths and stirrups, leather

Convenient holder for stirrups or girth.

Finally a solution for all who are annoyed by the dangling of stirrups or girth especially when saddling or carrying the saddle: this practical holder is attached to the D-ring on the saddle and stays there as decorative and practical element during the ride. Afterwards, just the holder through the girth ring or the stirrup – and they are neatly hung up.

- to fix your saddle girth to the saddle
- to fix your stirrup leathers to the saddle
- to fix to the saddle what needs to be fixed, f.ex. bags

Cannot be used for wide western stirrups.

HOLD-STIR-01 Black
HOLD-STIR-02 Brown

6 | Girth Converter **NEW**

Intelligent solution!

Two girth straps run through and over padding made from soft leather to avoid coat irritation or even pressure on the sensitive belly area. The girth converter can be used on all conventional western saddles. The sometimes tiresome western rigging with tie strap and off billet can be avoided since the converter can be used with all two-buckle girths (english girth).

GIRTH-CON-01 Black
GIRTH-CON-02 Brown

**STRETCH
& BREATH®**

5 | Girth Stretch&Breath®

The material for the Stretch&Breath® girth is specially made for us. This gives us a material which is tear-resistant but also totally stretchy.

The Stretch&Breath® material is then wrapped with a soft, adjustable case that protects the horse's sensitive girth area.

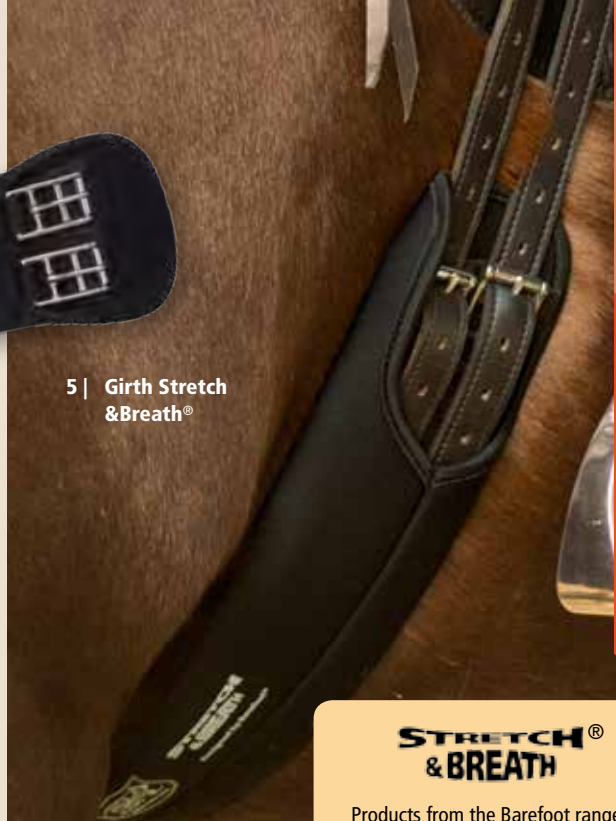

Advantages of the Stretch&Breath® girth at a glance:

- completely elastic: the horse's breathing chest movement is not restricted
- Soft coated with neoprene
- backed roller buckles at both ends
- The entire girth is machine washable

Length: 35, 45, 55, 65, 75, 85

G/ENG-STRETCH Black ●

5 | Girth Stretch & Breath®

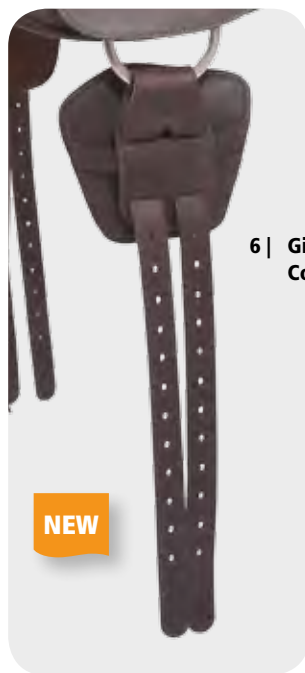

**STRETCH
& BREATH®**

Products from the Barefoot range Stretch&Breath® are particularly comfortable for the horse:

The highly elasticated material used allows the horse to breathe, the rib cage can expand whilst saddle sits perfectly.

Girths are tear-resistant and will not lose shape.

1 | Variable Breastplate

This breastplate is made from high quality, soft and flexible leather. The brown and natured coloured breastplate is adorned with handmade basket tooling, the black breastplate shows a noticeable stitching. The part close to the horse is padded with softleather all over - even more padded with thermoelastic foam, which allows easy conforming to the horse's breast. The padding overlaps slightly and is rounded off carefully to prevent shaving.

INTELLIGENT FITTING: This breastplate can be attached and easily fitted to every saddle because it offers two ways of fastening: both 2 leather ties and 2 snaps come with it.

- supersoft padding with thermoelastic foam
- handmade tooling or embroidery
- easy adaptation thanks to leather ties and snap hooks

- BREAST-01** Black, stitching
- BREAST-02** Chocolate oiled, basket tooling
- BREAST-00** Light oiled, basket tooling

2 | Variable Breastplate Stretch&Breath®

This breastplate is made from high quality, soft and flexible leather. The part close to the horse is padded with softleather all over – even more padded with thermoelastic foam, which allows easy conforming to the horse's breast. The padding overlaps slightly and is rounded off carefully to prevent shaving.

This breastplate can be attached and easily fitted to every saddle because it offers two ways of fastening: both 2 leather ties and 2 snaps come with it.

- supersoft padding with thermoelastic foam

Products from the Barefoot range Stretch&Breath® are particularly comfortable for the horse:

The functional material Stretch&Breath® remains the area of Breastplate highly elastic and does not restrict the movement of the horse.

3 | Communication Neck Ring

Barefoot – Designed FOR Horses

Super ring for aids from the saddle or also for groundwork. Plaited, sturdy, easy care DryTex™ material.

We have added a center patch which gives the ring weight and therefore helps to balance it. The ring lies with the patch against the horse's chest and balances itself. Through the wider patch reverse acting aids are optimally transferred to the sternum. The patch also looks chic – is braided and decorated with a concha.

The ring is also suitable for beginners to hold on to, seat exercises on the lunge or timid riders – in addition to bridle and saddle.

By the way: A neck ring is used in western riding for neck reining, that is: The horse yields to pressure – e.g. the ring applied to the right hand side of the neck and horse gives way to the left and turns into that direction. Communication can be so simple and fine!

Thickness plaited material:
approx. 12 mm
Length ring: 150 cm
Material: DryTex™

Neck Ring**

1 | Barefoot Ride-On-Pad

Riding without a saddle is now possible without harming your horse!

Most bareback pads or riding cushions are rather bad for the horse and cause discomfort rather than comfort, because the girth runs directly across the back and distributes all pressure onto one, maybe two spinous processes.

The Barefoot Ride-On-Pad has a v-girthing which distributes the pressure along the entire pad.

We deliberately decided against stirrup attachments as standing in stirrups would lead to pressure points.

The Barefoot Ride-On-Pad is padded with high density foam in alternating thickness and is very stable on the horse's back due to the Sympanova material on the underside. The upper side is made from microfiber which ensures good grip for the rider even at speed. The girthing is stabilized by patches, which have real sheep wool on the underside so the girthing does not irritate the coat along the horse's side.

- 3 D-rings to attach bags
- Carry handle made from sturdy nylon
- Horse friendly girthing
- Slip-proof underside

BAREBACKPAD RIDE-ON-PADS

Barefoot Ride-On-Pad Physio and Physio Color

The Barefoot Ride-On-Pad Physio has a special, paddable, velcroed-on underside. It comes with 2 different sets of shims (Rubber Foam and soft PU Foam) which can be inserted into the underside of the pad.

The shims ensure spinal clearance and additional protection of the horse's back.

We therefore recommend the Barefoot Ride-On-Pad Physio for: Older horses, horses with visible spinal processes and badly muscled backs, heavy riders, extremely slim riders, training young horses and for longer rides.

- comes with 2 different sets of shims
- qualified for older horses
- qualified for heavy riders
- qualified for young horse training
- D-rings to attach bags
- weight only approx. 3 kg

1 | Saddle Bag Trail 2-in-1

Practical bags with removable centre pouch.

We have thought of everything – the bags have two sturdy bottle halters, a separate pouch with velcro fastener for mobiles or GPS and long straps to attach to most saddles. Two easily accessible, spacious side pouches with logo offer plenty of practical storage space.

Innovative feature : The zippered centre pouch is attached via velcro and can be removed for rides where less luggage is required. Hidden under the centre pouch are two additional straps with clips to quickly attach blankets or coats.

The bags are extremely light-weight (1.6 kg). Manufactured from 600D nylon with polyurethane coating, excellent for outdoor use due to its water and dirt repellent properties. All bags are padded, comfortable to use, shock-resistant and therefore horse-friendly.

- extremely light-weight (1.6kg)

6 | Backpack Walk-My-Horse

6 | Backpack Walk-My-Horse

Walking with your horse is important to establish trust. During a walk to discover new things together - while allowing your horse to learn about horse/human partnership and extend your ground work. It's especially good for young horses to learn to walk on the trail. There is much to explore – the more we do this from the ground with our horses, the safer they become under saddle.

For these walks and for pack horses we have come up with a great bag, with plenty of storage space, two large pockets, a bottle holder, GPS pocket, map pocket, straps for coats or blankets, etc...

- Backpack for walking with your horse or for pack horses
- ideal for young horses
- ideal for older horses that should not be ridden
- 9 pockets, some with a zipper or clip closure
- elastic V-rigging

Size of bags: 2 x H 28 cm, W 27.5 cm, D 9 cm

BACKPACK-01 Black 

7 | Saddle Bag, real leather with tooling

Beautiful double saddle bag made out of long-lasting, hand-tooled brazilian leather. The leather is slightly oiled and therefore water repellent. The saddle bagage has three karabiner hooks for easy, secure mounting to the saddle and a set of leather strings on each side to attach further luggage (Jackets, blankets...). Stainless steel roller buckles allow for easy opening and closing of the saddle bag.

Size bags (each): 20 x 25 x 8 cm

Colour: Chocolate oiled with small basket tooling.

BAG-NUT Chocolate oiled 

1 | Contour Jewel Bridle

Barefoot – Designed FOR Horses!

This bitless bridle distributes the pressure gently and evenly across the nose and cheeks. It ensures aids are received without any pain and helps create trust between horse and rider.

The throat lashes are extensions of the reins – their cross-under design allows the horse to understand aids easily without wrong flexion at the poll. This bitless bridle makes riding with the lightest aids possible: A short impulse/pressure on the left rein creates a pain free but distinct pressure on the opposite side of the horse's head. The horse moves away from the pressure on the right and reacts with bending to the left. Short impulse/pressure on both reins or alternate reins - your horse will give.

- bitless alternative for all riding disciplines
- patented Contour - headpiece
- even and gentle pressure distribution
- soft nose-, brow- and headpiece padding
- rhinestone decorated

Bridles
Contour

Shaped headpiece takes pressure off the nuchal ligament attachment.

Bridles Contour

The sensitive area between the horse's ears – the atlas – represents the transition to the cervical spine, with the foramen magnum connecting the brain with the medulla. The atlas is also where the nuchal ligament starts, which is responsible for the whole chain of movements of the back. It is precisely here at the nuchal ligament onset that too much pressure / stress can cause inflammation.

As a result, the horse is suffering great pain and movement is severely impaired ...

Barefoot has the horse friendly solution:

... The poll area of the Barefoot Contour headpiece is shaped so that no pressure is applied to that delicate area between the horse's ears.

The centre of the headpiece is sharply bent forward and therefore lies in front of the nuchal ligament onset.

The main bearing surface is on the neck muscle, left and right behind the ears. The area around the ears is shaped and softly cushioned.

Brochure from our series „FOCUS Horse – changing toward a horse-friendly philosophy“ see page 89.

2 | Contour WELLington 2-in-1 Bridle

The Barefoot Bridle Contour is formed in such a way, that it spares the atlas, avoiding the application of any pressure. The browband and the noseband are shaped anatomically as well: The noseband is shaped upwards along the bridge of nose so breathing is not restricted.

2-in-1: The bridle can be used with or without a snaffle bit. The cheek piece can easily be removed or attached thanks to a Chicago-screw.

The brow-band as well as poll- and nose-band are padded softly completely, including the area of buckles and around the ears.

- exact fit to horse's head
- precise aids through perfect fit
- no slipping towards horse's eye
- many uses

Barefoot – Designed FOR Horses!

The solution:

Not only for sensitive horses!

For all styles of riding and lunging.

The Barefoot Contour Physio bridle can be precisely fitted to the horse's head as it is of a totally different design to traditional bridles.

1. The Contour poll area is shaped forward so that no pressure is applied to the sensitive area behind the ears where a nerve trunk attaches to the occipital bone.

The headpiece is softly padded and curved around the horse's ears – the ears have room, the headpiece nestles softly.

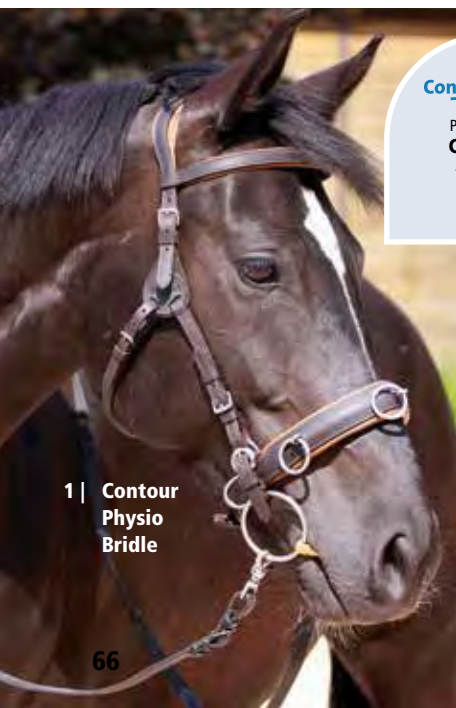

2. The cheek pieces and throat lash are thought through and fitted to the horse's head in a different way. The cheek pieces fork out, this y-shape prevents slipping: the horse's eye stays free! The bridle can be precisely fitted to the horse's head and stays in place.

Cavesson
+ bit straps

1 | Contour Physio Bridle

2 | Barefoot Cavesson

Innovation from Barefoot!

The Barefoot cavesson noseband is wide and comfortably padded. Inside the noseband is incorporated a sturdy, bendy wire. The noseband is shaped around this wire and can therefore be fitted to each individual horse's head. The nose piece stays in a better position and does not slip.

The 5 integrated rings allow for many possible uses.

The Barefoot Cavesson is even suitable for bitless riding: The reins are buckled to the outer rings. For lunging use the middle or one of the round side rings.

We recommend using this noseband in conjunction with the Barefoot Contour Physio headpiece, which conforms perfectly to the horse's head, leaving the sensitive eye area. Bit straps are included.

Length 0: Pony, 57 to 66 cm
Length 1: Thoroughbred, 63 to 73 cm
Length 2: Warmblood to Draft, 67 to 77 cm

3 | Barefoot Shape-It-Soft

During basic training and groundwork should reach as precisely as possible - especially on the horse's sensitive head. Most nosebands used for this training unfortunately slip back and forth on the nose/head and make precise, 'on the spot' aids impossible. That is why we have been thinking and developed a nose piece which incorporates a sturdy, bendy wire: The noseband is shaped around this wire and can therefore be fitted to each individual horse's head. The nose piece stays in a better position and does not slip.

The Barefoot soft noseband is wide and comfortably padded. The Barefoot soft noseband is even suitable for bitless riding: The reins are buckled to the outer rings. We recommend using this noseband in conjunction with the Barefoot Contour Physio headpiece, which conforms perfectly to the horse's head, leaving the sensitive eye area free.

The Barefoot Shape-It-Soft noseband can of course also be used with any standard headpiece.

Bit straps are not included!

Contour Trail

1 | Contour Trail Bridle

1 | Contour Trail Bridle

The Contour poll area is shaped forward so that no pressure is applied to the sensitive area behind the ears where a nerve trunk attaches to the occipital bone. The headpiece is softly padded and curved around the horse's ears – the ears have room, the headpiece nestles softly.

This Barefoot bridle comes with multiple adjustment possibilities. Crown piece, noseband and throat latch can be adjusted on both sides and can be fitted from a pony to a warmblood. The bit can easily be buckled on and off. The throat latch can be removed completely and the bridle can be used as a halter.

The noseband is softly padded and has 2 additional rings to attach reins and ride bitless.

Our recommendation: The entire bridle should be buckled loosely; the noseband should have ample room so it does not interfere with the horse's breathing.

The bit can easily be buckled on and off.

Bridles
Contour

Shaped headpiece takes pressure off the nuchal ligament attachment.

2 | Leather Reins

Closed reins made of quality and strong leather material useable with all 'english' bridle types. The reins have a good grip, as they are only 1.6 cm wide. Length: 320 cm. See also page 20.

Ending the myth of "being on the bit"
Sabine Ullmann

Brochure „Bitless Riding“

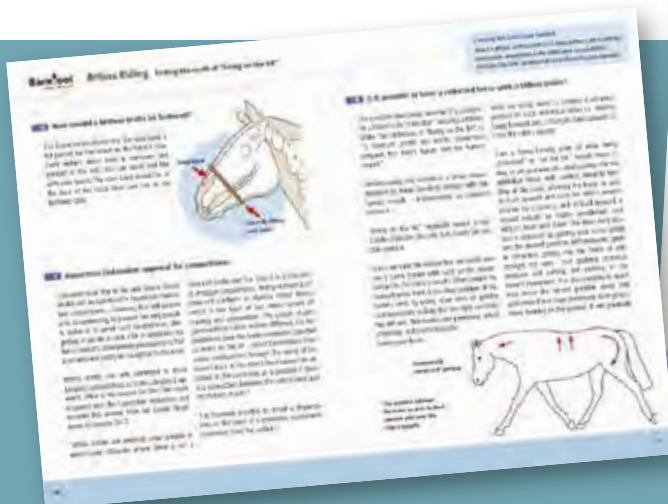

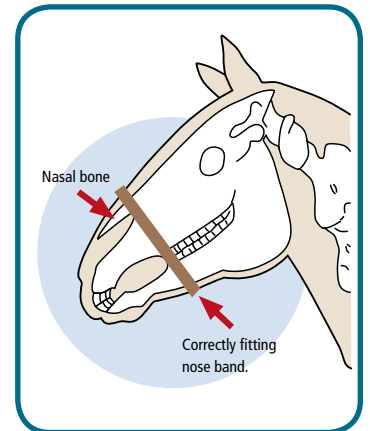

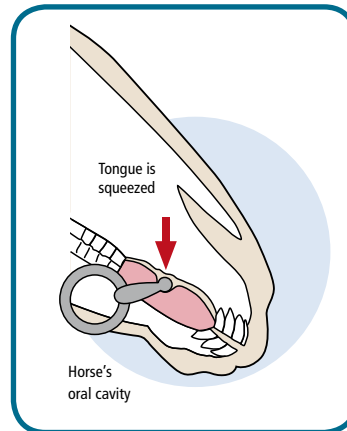

Order free or download here:
www.barefoot-saddle.com/de/en/Brochure-series-Focus-Pferd

Why without a bit?

If we were to ask horses whether they like the idea of having a bit in their mouths, the answer would certainly be "No bits, thank you very much!"

On principle, there is no room for a bit in a horse's mouth – no matter what type it is. Horses have a relatively small oral cavity, so most common types of bit are too bulky and put pressure on the tongue and/or roof of the mouth. Narrower bits can put more pressure on the horse's sensitive tongue and very quickly become painful.

You can find further information on bitless riding in our brochure Nr 3.

1 | Shape-It™ Noseband

Noseband Shape-It™ made of genuine Nubuck leather with rings fitted at each side for reins to be attached.

- noseband for bitless riding and groundwork
- flexible = adapts to the horse's nose
- suitable for all conventional bridles

Innovative feature: A flexible wire inside the noseband allows it to adapt to the horse's nose. The 'Shape-It' noseband therefore becomes more stable and does not slip so easily. More precise aids are guaranteed.

Fitting: The two top rings are simply attached to the cheek pieces of a conventional bridle. The noseband should be fitted 2-3 cm under the cheekbone.

With added bit straps Noseband 'Shape-It' can even be used with a bit.

Length 1: Pony to Thoroughbred, 68 to 78 cm

Length 2: Warmblood to Draft, 72 to 81 cm

HACK-CHIN-VIRG Light oiled

Mindset

Barefoot Hackamores

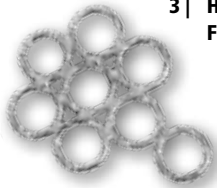

Without bit to flexion and understanding between horse and rider! For riders who would like to communicate with their horses in a gently way.

The Barefoot hackamores attach to the bridle in a similar way to a bit or hackamore. Your signals or aids via reins are mainly absorbed via the nose.

Recommended especially for horses with wolf teeth or other dental problems, horses with sensitive mouths, horses who lean on the bit, head shakers and bit ,sour' horses.

As soon as your horse has converted to bitless riding, any lesson can be taken – light flexion is possible. In addition you will require a nose and chin strap, to secure to the horse's nose.

3 | Hackamore Flower

3 | Hackamore Flower

Like a bit, the Barefoot Hackamore Flower attaches left and right to the bridle only that your horse has no ,metal in his mouth'. Your aids are transmitted via the horse's nose. As soon as your horse has converted to bitless riding, any lesson can be taken – flexion is possible. The Barefoot Hackamore Flower allows for some leeway. The rein action/control is variable depending on which ring is used. The strongest effect is achieved when rein is attached to the lowest ring (light leverage).

Flower

4 | Barefoot Bitless Bit

Suitable for Dressage lessons!

Attached the Barefoot Bitless Bit lies flat against the horse's head and does not cause pinching when in use. Nose and chin straps attach to outward lying metal eyelets and therefore do not assert pressure on to the horse's head. Precise aids can be given.

Reins can be attached in various ways: with or without leverage effect.

1 | Walnut Bitless Bridle

The humane alternative for all riding styles.

Our bitless bridle distributes the pressure lightly and evenly over the nasal bone, the cheeks and the poll. It does not create punctual pressure in just one spot and therefore provides pain free and safe rein aids which increases the trust between horse and rider.

The throat latch is the extension of the reins – due to the criss crossed reins the horse understands your aids easily which will help you to put her/him on the bit without twisting or false bending at the poll.

Bitless bridles work very well with even the slightest pressure; e.g. quick halfhalt on the left rein triggers a steady but pain free pressure on the opposite side of the horse's head. The horse evades the pressure on the right and turns to the left. If you apply light pressure on both reins or right and left on the individual reins – your horse will yield and give at the poll.

Very suitable for every riding style, western, english, endurance or trail – even lunging. As with all new equipment we suggest to try the bitless bridle in a fenced in area first. The noseband should be resting 2 cm above the mouth crease and you should be able to get 2 fingers under the noseband.

Our bitless bridle is an especially gentle design. Noseband, crown piece and browband are all nicely padded. The crown piece is extra wide and has a thick padding to reduce pressure behind the ears.

- mild and even pressure distribution without force
- soft nose, browband and poll padding
- crown piece extra wide with a thick padding

Sizes: 1 (COB) and 2 (FULL). Also available in size pony, see page 30.

Barefoot Leather Care

Do not use grease or wax for the care of nubuck or soft leather as it will cloak the leather's pores.

We recommend our leather care range:

Syringa

7 | Syringa Bridle 2-in-1

Our Bridle Syringa can be used without a bit as side-pull or as a Bitless-Bridle with crossed reins – see below.

It is great to be used for ground work or longeing.

Browband and crown-piece are padded softly. The crown-piece is extra wide and thickly padded, so it reduces punctual pressure behind the ears noticeably. Pressure is applied onto the bridge of the nose by two doubled ropes, which are tied together along the side.

Comes with matching reins in a leather-ropes combination with snap-hooks.

- bitless alternative for all styles of riding
- soft and even distribution of pressure without force
- softly padded brow-band
- crown-piece is extra wide and thickly padded
- embroidery on browband and cheekpiece
- including reins

Juniper

1 | Juniper Halter 3-in-1

Knotted halter with special features. Smart knotted halter with three special features: one can use it for ground-work, as a bitless bridle or use with bit or hackamore. Matching reins and rope available. The halter comes with five rings made from rust-proof steel. Thanks to the knots the halter can easily be fitted to the horse's head.

Material: polypropylene with cotton core.
Sizes: 1 (COB) and 2 (FULL)

JUNIPER-HALT Brown/Ivory

Advice

NEVER tie your horse with this halter or put it on pasture. For that purpose, use a halter with break-away-function ...

3 | Panic Snap, small

- ideal for knotted rope halters
- quick release for safety
- rust free stainless steel

PANIC-HOOK-MINI

2 | Halter 2-in-1, real leather

The Barefoot leather halter has two exchangeable crown pieces – both with horse friendly function:

1. In all cases when the horse has to be tied securely: Locked crownpiece made from soft nubuck-leather with thermo elastic padding – formed anatomically to fit the horse's poll so that the onset of the ears is free of pressure.
2. To tie and to turn-out: Crown-piece with break-away-function, softly padded with real lamb fur. The crown-piece is doubled and attaches with Velcro. In case the horse should panic, step into the halter or get hooked to the fence, the Velcro fastening opens.

Size 1 (COB), Size 2 (FULL)

4 | Juniper Rope

This rope made from polypropylene with cotton core has the ideal length to work with your horse from the ground (4.20 m). The rope lays smooth in your hand and more rigid than a regular rope, so it is easily coiled-up without tangling. Decorative latigo popper in the style of the Barefoot Feather at the end, sturdy snap hook in the front.

Length: 4.20 m

6 | BeGentle™ Halter

Rope Halter BeGentle™, made of soft, smooth material in two-tone colours.

Rope halter can be used for ground work with lead rope or line but reins can also be attached to the side rings. With matching reins, rope halter can quickly be turned into a riding halter.

Soft over the nose through matching colour padded sleeve.

Nice, striking colour combinations!

- rope halter for groundwork and for riding
- side rings for attaching reins
- soft material + padded noseband
- matching reins available
- in four sizes, fits also Shetlands and Drafhorses

9 | Headcollar Stretch & Breath®

Brown

9 | Headcollar Stretch & Breath®

Pretty and functional.

The Barefoot Stretch & Breath® halter uses elasticated material in the poll and nose area which will give way should your horse get into a situation it has to free itself from. The horse can slip off the halter without it losing its shape or function and therefore can then be used again. The headcollar is ideal for use in paddock, field or on young horses which are not, as yet, used to being tied up.

Included with the headcollar are real sheep-wool sleeves for both noseband and headpiece. The sleeves can be removed as they are velcroed on. For added safety, the headcollar is closed with a small panic hook

which can be opened with one hand and gives additional safety.

The article is washable at 30° – please remove the cover from sheep-wool and wash separately by hand. Pull into shape before drying.

Stretch & Breath® material in black, fur saver in nature.

1 | Lungeline Super-Grip

The somewhat different lunge-line made from non-slip super-grip material – created by Barefoot.

The lunge-line is extremely light weight (weighs just 370 gram). It is comfortable to hold and the super-grip material made from nylon with a special rubberized fabric woven in, ensuring a secure hold even when wet.

The lunge-line is equipped with a large, sturdy snap with rotator so it will move along when changing sides. Really smart is the decorative stopper at the end.

The last four meters are marked with different colours each, so you are always aware about the current length when lunging and doing ground work.

- made from non-slip material
- coloured marks to control length
- rotating snap
- stable stopper at end

Length: 8 m

LUNG-LINE-SG Black ●

1 | Lungeline Super-Grip

2 | Lunging Bit Expert

2 | Lunging Bit Expert

Lunging with common-sense.

The Barefoot Lunging Bit Expert does away with annoying snaps, but offers a smart Quick-Change fastening made from real leather.

The ring for attaching the lunge turns and moves freely so it doesn't jerk the horse's mouth – the horse can easily be directed into a different direction.

4 | Pad for surcingles

Our pad comes in two parts and is safely attached to surcingle with velcro to avoid slipping.

The withers therefore stay stable free and the sensitive spinous processes in this area are not squeezed.

- pad for surcingles
- divided in the middle
- avoids pressure on the withers

Underside made of felt, upper side of microfibrines. Internal foam cushion thickness approx. 25 mm.

PAD-SURCINGLE

Black

4 | Pad for surcingles

Pictured at Surcingle Save-My-Spine

NEW

5 | Riding pad for Surcingle

This pad can be attached to either lunging or therapeutic riding surcingle.

The rider can hold on tight to lunging, therapeutic riding or vaulting surcingle whilst being safely seated behind on non-slip, padded riding pad.

Ideal especially for young horses, backing, horses with saddle sores, old horses, nervous riders, seat development, therapeutic riding...

Materials: The inside is thickly padded with different levels of foam ensuring that the seat area is slightly lower than the outer part of the pad = seat frames the rider.

The underside is made of non-slip sympanova mesh.

The top layer is made of micro fibres.

**Lunging and therapeutic riding
WITHOUT pressure to the withers**

Most lunging, vaulting and therapeutic riding surcingles apply nutcracker-like pressure onto the horse's withers – either to the sides or on top of the spinous processes.

We have solved this problem: underneath the Barefoot surcingle the withers remain unrestricted and there is no pressure – neither onto the withers nor along the sides. The supports on both sides are padded softly and extra wide, so that muscles can develop – without being squeezed.

1 | Surcingle-Therapy

The handles are anatomically shaped giving a safe hold even for small hands. The surcingle therefore becomes an ideal training aid for beginner riders and for therapeutic riding. The handles can easily be removed and exchanged with a Barefoot insert without handles.

The correct size for the front insert should be measured by using the sizing template from our webpage. It can be adjusted to your horse's shoulder by shimming the underlay. More information see page 48.

Five (!) sturdy rings are applied on both sides, so all auxiliary reins such as side-reins can be attached, but also long-reins or double lungeing rein can be used in various positions. The surcingle is made from genuine, sturdy leather, with a soft and adjusting underlay made from foam which is covered by suede leather.

5 | Barefoot Communication Trainer-Stick 4-in-1

This is how horse experts train! Our different uses:

- as lunge whip
- as groundwork stick
- for target training
- incl. acoustic signal

It could hardly be more versatile!

Many possibilities and ideas are hidden within our Barefoot Communication Trainer Stick for work with your horse on the ground.

TRAINERSTICK-4-IN-1

Groundwork builds trust between horse and rider

We have designed products from selected materials which are particularly suitable to learn lessons, lunge or play on the ground.

Our training products are available in colours yellow, blue and black as these colours are best seen by horses.

6 | Ball

Horses learn to trust us on the ground. With our training equipment, learning will be double the fun.

The large ball can be rolled with the nose or kicked with the hoof, used for target training and to teach your horse to accept objects around him or under his belly.

Size: 75 cm

Experts commend

Lloyd and Isabel Gillespie

Lloyd and Isabel Gillespie

Horse guides and experienced horsemen

We have started our journey in July 2009 in Durban and will probably be finished by the end of the year 2010. We have been on the road for a year and 1 month and have ridden 5145km so far. It will take us roughly another 4 months to get back to Durban. (approx. 1900km).

“What a difference! The saddles feel so different in comparison to the saddles we have used before. We had such problems to find a saddle that fits our horse Fever. Most of the saddles we have tried would sit “on top” of him and fit too tight on his wither. Through that I would feel “top heavy” and sometimes imbalanced in my seat. It was so bad that the saddle would occasionally slip under his belly. Fever is a nervous horse and it was not good for him.

Kate Godfrey

Kate Godfrey

Long distance rider and author of Discover Off-Road Riding

Kate Godfrey enjoys the Barefoot Cherokee on her 1.000 miles trip around Scotland while helping the World Horse Welfare.

I used the Barefoot Cherokee on a thousand mile ride around the hill tracks of Scotland. Some of the time I rode in it, and some of the time it carried packs and panniers. The saddle survived some very tough handling: being constantly wet due to poor weather and river crossings, as well as going up hill and down dale, scraped against gateposts and trees, but still looks as good as new.

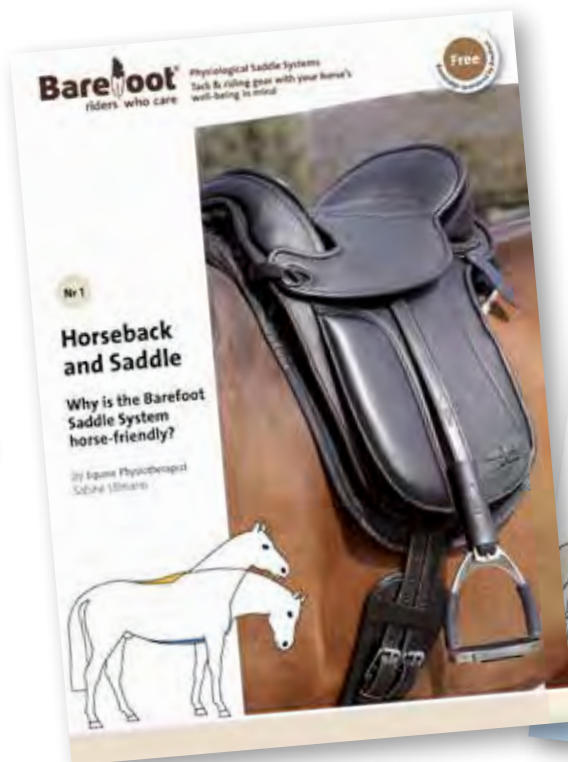

Many brilliant horse people have already tested our Barefoot products. We have gathered here some expert's opinions for your information:

Even better, Doogs, my Highland pony, survived the whole trip without so much as a mark on him: the saddle was obviously comfortable for him and he was always eager to be tacked up. It stayed in place well, even with panniers which is a tough test for a saddle, as it means carrying dead weight and it is easy for a saddle to slip in these conditions. It was immensely comfortable to ride in, too.

**Healthy
horseback**
with spine protecting system

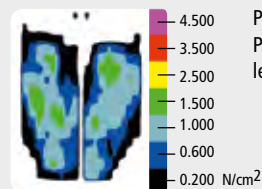

- spinal clearance
- no weight limit
- weight distribution

The VPS® System

The panel construction creates a reliable gullet and guarantees the constant protection of the horse's spine.

Pressure testing has shown, that this eliminates any punctual pressure.

Pressure testing
Posting Trot,
left handlinke Hand

What does VPS® mean?

VPS® stands for ‚Vertebrae Protecting System‘.

It consists of a combination of different materials; some are more pressure absorbing, whilst others are more pressure distributing.

All components are totally flexible, therefore the saddle adjusts immediately to the movements of the horse and problems due to changes in the horse's conformation are eliminated.

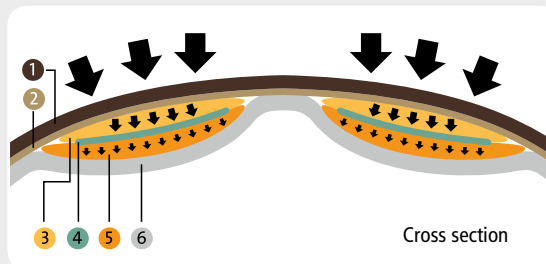

The VPS® System is not bulky and therefore allows an acutely close contact and communication between horse and rider.

Why VPS® System?

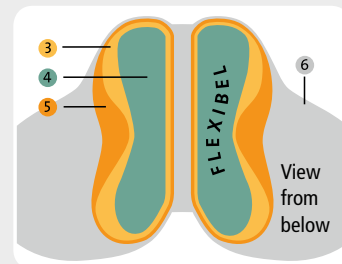

Best possible weight distribution in the area which should carry the majority of the rider's weight – between the withers and the 15th/16th vertebrae.

During rising and two pointing, the rider's weight is distributed over the entire footprint of the saddle – no limitation of the rider's weight.

Components of the VPS® System:

Cross section

View
from
below

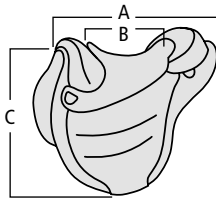

- 1 top material (leather or DryTex™)
- 2 cushioning PU foam layer
- 3 shock absorbing Elastomer, layer 1
- 4 pressure distributing Polymer layer
- 5 pressure absorbing Elastomer, layer 2
- 6 equalizing fleece lining

Very elastic ‘sandwich construction’ made of shock absorbing Elastomer layers and a pressure distributing Polymer layer.

All materials consist of a smooth surface and have levelled edges. We do not use upholstery material which could decompress unevenly and create an uneven pressure distribution.

The fleece lining of the saddle creates a soft underside which can compensate for any minor unevenness.

Saddle Sizes (* = Custom-made product)			 Barefoot Horseaid

About Saddle Sizes:

Barefoot Saddles are hand made. This makes every saddle unique. The measurements are therefore just reference points and can vary slightly.

Please note:

The length of saddle (A) is the overall length. Since there is no pressure at all in the rear part, the horse can move freely. Even if the saddle looks a little too long on your horse, choose the size according to your measurements. It is very important that the saddle fits the rider well, so he has enough space between thighs and pommel and does not sit on the pommel or cantle, which would limit the saddle's adaptability. The horse's back is free of any pressure at the rear – the Barefoot can even be lifted slightly at the cantle with a rider on board.

EQUINE KNOWLEDGE

Experts recommend	88
Barefoot Brochures Series	89

Because we love horses ...

... we accept responsibility

Responsibility means to us eg non inclusion of products in our range that could harm your partner horse in any way.

Our team of horse experts constantly develop new products according to their own ideas and customer suggestions. Our motto: Better for the horse and therefore better for the human as only a relaxed, pain free horse is motivated and therefore willing to perform.

You will not find any strong bits, spores or whips on the previous pages but flexible saddles, bitless or variable bridles and practical, horse friendly accessories for training and fun with your horse.

We are also constantly in discussion with experts, not only for them to test and recommend our products but for them to contribute with their expertise, to change the handling of our horses, in which they show us how to treat a horse fairly according to nature.

We have also produced a series of brochures FOCUS horse, in which these experts pass on their valuable knowledge to you. Sponsored by us, therefore available absolutely free of charge because we take responsibility!

We support animal rescue homes – assist us!

When buying a product with this symbol, you automatically donate one Euro to the Barefoot Horseaid.
